Laboratory note: The estimated concentration of the unknown peak in the sample is 2.38% | Currently PharmLabs laboratory can not confirm an unidentified peak in your chromatogram due to interference (only with highly concentrated D8 products) from which we believe to be either (+)- δ -THC or d9-THC. At this time there are no reference standards available for (+)- δ -THC. (+)- δ -THC is a different compound from the main (-)- δ -THC cannabinoid and, therefore, these two compounds may have different efficacies. Using the most advanced instruments and techniques available, the separation of (+)- δ -THC and d9-THC is problematic for the scientific community as a whole. PharmLabs believes the unidentified peak to be a combination of (+)- δ -THC and d9-THC with the majority, if not all, of the concentration being (+)- δ -THC. Total (+)- δ -THC Concentration is estimated to be: 6.34%

CANX - Cannabinoids Analysis
